

CHUCHU AI STUDIO

Inquiry -> Agreement Field Map

A practical internal map for turning a returned Client Project Inquiry & Discovery Form into a nearly completed Master Service Agreement + Schedule A.

DIRECT TRANSFER Copy to the Agreement with only basic formatting/verification.	REVIEW / DERIVE Use the inquiry as input, but CHUCHU AI STUDIO must decide the final contract wording.	STUDIO / CONFIRM Not supplied by the inquiry; create or confirm before sending the Agreement.
--	--	---

Core rule

The inquiry records what the client wants. The Agreement records what CHUCHU AI STUDIO actually agrees to build. Never copy requested features into the legal scope without a scope review.

1. Direct-transfer fields

Fields that can pre-fill the Agreement

Inquiry field	Agreement / SOW destination	Rule
Your name	CLIENT - Authorized Representative	Copy directly. If client is an individual, this may also be Company / Individual.
Company / organization	CLIENT - Company / Individual	Copy directly. If blank, use client name as the individual contracting party.
Role / job title	CLIENT - Job Title	Copy directly.
Email	CLIENT - Email	Copy directly and verify spelling.
Phone / WhatsApp	CLIENT - Phone	Copy directly if supplied.
Selected service type	Schedule A - Project Type	Copy the selected category, then confirm after review.
Target platform(s)	Schedule A - Platforms	Copy selected platforms; remove any platform not included in final scope.
Preferred first usable / launch date	Schedule A - Estimated Delivery Date	Use as the client target, then replace with the Studio-approved estimated delivery date.

Note: The inquiry form does not ask for the client registered address. That must be requested or confirmed before the Agreement is finalized.

2. Review / derive fields

Fields CHUCHU AI STUDIO should draft from the inquiry

Inquiry information	Agreement / SOW destination	How to translate it
"What do you want to build?" + problem + target users	Schedule A - Project Objective	Rewrite into a concise, professional objective: what will be built, for whom, and what problem it solves.
Feature checklist + 3 must-have features	Schedule A - Included Features	Create the final v1 feature list. Include only features CHUCHU has accepted into the quoted scope.
Requested features not selected for v1	Schedule A - Excluded / Future Features	Move deferred, optional, over-budget, or later-phase items here. This protects scope.
Existing assets	Schedule A - Additional Terms / client responsibilities	Identify client-provided branding, content, accounts, APIs, backend, documentation, etc. State what the client must supply.
AI / technical requirements	Included Features + Additional Terms	Convert into specific implementation obligations only after technical review. Third-party AI/API costs should be called out separately where relevant.
Sensitive / confidential information answer	Additional Terms / data & privacy notes	Use to flag privacy, security, confidentiality, or data-processing requirements. Do not invent legal compliance promises.
Success criteria	Project Objective / acceptance wording / Additional Terms	Turn vague goals into testable outcomes where possible. Commercial outcomes such as downloads or revenue are not guarantees.
Additional notes, references, competitors, links	Included/Excluded Features or Additional Terms	Use as context. Only incorporate items that are intentionally part of the agreed scope.
Decision-maker	CLIENT - Authorized Representative (only if confirmed)	Use only if the named decision-maker is also authorized to sign. Otherwise keep as an internal contact note.
Preferred communication	Internal project note	Useful operationally, but generally not required in the Agreement.

3. Studio-generated / confirm fields

Information that should NOT be copied blindly from the inquiry

Agreement field	Source / rule
Agreement No.	Generate internally using CHUCHU AI STUDIO naming/numbering convention.
Effective Date	Set when the Agreement is ready for signature or as agreed with the client.
Jurisdiction	Choose deliberately for the engagement; do not infer from the client email or location alone.
Service Provider legal entity / proprietor	Use CHUCHU AI STUDIO contracting identity exactly as legally applicable.
Service Provider registered address	Use the Studio legal/business address once confirmed.
Client registered address	Request/confirm separately; it is not currently captured in the inquiry form.
Project Name	Create a concise project name from the client/product concept.
Deliverables	Draft from the final approved scope: builds, source code, documentation, store submission, handover, etc.
Estimated Start Date	Set based on signed Agreement, deposit receipt, client readiness, and Studio capacity.
Total Project Fee	CHUCHU quotation after scope review. Do not treat the client budget range as the contract fee.
Payment Currency	Use the quoted/accepted currency. Client budget currency can be a hint but must be confirmed.
Additional Terms	Studio-authored project-specific terms: third-party fees, client-provided assets/accounts, special acceptance conditions, privacy/security notes, dependencies, etc.

Payment milestone calculation

30% Commencement Deposit	Total Project Fee x 0.30
30% Development Milestone	Total Project Fee x 0.30
25% Beta / Acceptance Testing	Total Project Fee x 0.25
15% Final Acceptance / Handover	Total Project Fee x 0.15

4. Recommended workflow

How to use the map for every client

- 1. Website lead arrives.** Client submits the short contact form.
- 2. Send Project Inquiry & Discovery Form.** Client completes the detailed requirements document and returns it by email.
- 3. Scope review.** CHUCHU AI STUDIO decides what belongs in v1, what should be excluded/deferred, the deliverables, schedule, fee, and special terms.
- 4. Pre-fill Agreement.** Transfer direct fields, draft review/derived fields, and complete Studio-only fields.
- 5. Internal QA.** Confirm client identity/contact information, scope, exclusions, timeline, fee, currency, milestone math, third-party costs, and missing legal/registered address fields.
- 6. Send Agreement for review/signature.** Client should mainly review the completed project terms, request corrections if needed, and sign.
- 7. Initial payment.** Client sends the signed Agreement plus proof/receipt of the 30% commencement deposit.
- 8. Start project.** Development begins only after the Agreement is signed, the initial payment is confirmed, and any required client assets/access are available.

Future automation logic

When we automate this later, the system should classify each target field as **direct**, **draft-for-review**, or **Studio-required**. It should never auto-sign, auto-quote from a budget range, or silently convert every requested feature into contractual scope.

Pre-send Agreement checklist

- Client/company identity correct
- Signatory authority confirmed
- Registered address obtained
- Project type and platforms confirmed
- Objective rewritten clearly
- Included features limited to agreed v1
- Excluded/future features listed
- Deliverables explicit
- Start/delivery dates realistic
- Fee and currency approved
- 30/30/25/15 milestone amounts add to 100%
- Third-party fees/accounts addressed
- Special AI/privacy/security requirements addressed
- Agreement ready for client review and signature
